

Medium Connectors

BNC, TNC, N Custom Capabilities for 50 or 75 Ohm Connectors

Palco Connector offers selected versions of BNC, TNC, and N connectors to meet your custom application requirements. Ideal for computer workstations, test instrumentation, medical equipment or telecommunication applications, Palco connectors can be precision screw machined and manufactured to meet MIL-C-39012 specifications. Engineered for ruggedness and durability, each connector features a weatherproofing, silicone gasket, as well as a gold, center contact and interface design to meet MIL-STD-348A. Plating options in nickel, silver or gold are available to match your environmental requirements.

The BNC Miniature Connector

The BNC, bayonet connector offers a quick connect/disconnect, twist-on design, for multiple mating applications, low reflection, and operational to 4 GHz.

The TNC Miniature Connector and the Medium N Connector

For equipment operating in harsh environments or with extreme vibration, the TNC and N connectors offer a reliable threaded coupling and operating frequency from DC to 11 GHz with an option in size to accommodate your miniature or medium connector needs.

The N connector series, popular for antenna applications on broadcast equipment, features a consistent low VSWR, with a voltage rating of 1000 V RMS across a broad frequency range.
